

Programme Plan Construction

Understanding timings, dependencies and resourcing needs

The creation of a realistic Customer Management Programme needs insight and experience as well as project management competence.

The Customer Framework Programme Planning Module contains experience-based, default elapsed timings and resource levels for hundreds of the capabilities that you are likely to need to implement. It also contains all the relevant dependencies between these capabilities.

Each Programme Plan is constructed, based on the Customer Framework default values completely tailored for the nature of the change being planned, the client's own areas of competency and any client specific tasks that are needed as part of the programme.

The outputs provide clear quantification of manpower resource requirements, both internal and external; non-manpower resources; a detailed programme plan with indicative timings and the relevant dependencies in place.

The programme plan can be provided in Microsoft Project format or as an Excel Spreadsheet.

Internal Resource Needs							
Resource Type	2008		2009		2010		Total
